

# Recent advances in the MRI after RFA and TACE

**LIVE WEBINAR: 14 Jul 2021 (Wed) 17:00-18:30 (HK Time)**

## Abstract

Liver cancer was the fifth most common cancer and the third leading cause of cancer deaths in Hong Kong and accounted for 5.1% of all new cancer cases in 2018.[1] There are many advances in the imaging modality and treatment over the past decade allowing for earlier diagnosis and treatment. This presentation takes a look at the efficacy of gadoxetic acid after Radiofrequency Ablation (RFA) and Transarterial Chemoembolization (TACE).

## Speaker

### Dr. May Lau

Regional Medical Advisor  
Bayer APAC (Sub-region) Regional medical team

## Target Audiences

- Radiologists
- HBP Surgeons
- Hepatologists
- Oncologists
- Radiographers

## CME/CPD Accreditations

(Co-organizers)

- Hong Kong College of Physicians - 1.5 CME
- Hong Kong College of Radiologists - 1.5 CME/CPD (Cat. A)
- The College of Surgeons of Hong Kong - 1.5 CME
- Hong Kong Radiographers' Association - 1.5 CPD
- The Hong Kong College of Radiographers and Radiation Therapists - 1.5 CPD
- The Hong Kong Radiological Technologists' Association - 1.5 CPD

## Online Registration
